DRR TRACER AGENT

# DRR Tracer Agent: getting started

The DRR Tracer Agent lets you look up any field in any DRR report and see why it is reported the way it is. This page explains how DRR traceability works in the Tracer Agent and how to get access.

## What DRR is

DRR is ISDA's initiative to standardise regulatory reporting using the Common Domain Model. For background, see ISDA Digital Regulatory Reporting.

How a report is produced is discussed and agreed in the working groups. Those decisions are recorded in the group's minutes, then written into the code and published in a release. The DRR Tracer Agent is where you can read that shared industry interpretation, and see the evidence behind it. That is DRR traceability.

## What DRR traceability means

DRR traceability is the record of those decisions. For each field it links four things:

1. The part of the regulation that requires the field.
2. The working group discussion that settled anything the regulation left open.
3. The validation rules the field has to satisfy.
4. The code that fills the field in.

So instead of taking a reported value on trust, you can see why it is that value, and who decided.

## How we produce DRR traceability

Everything the Tracer Agent shows you either comes from ISDA DRR or is produced by AI. AI-generated material is labelled, so you always know which you are reading.

- **From DRR.** Fields, regulation references, validation rules, diagrams and code are read straight from the published model, and the minutes are the original documents. Each release is read separately, so a field can be read as it stood at any version.

- **From AI.** The explanations written in words, and the matching of minutes to fields. A link between a minute and a field is the Tracer Agent's reading of the minutes, not something recorded in DRR.

The label on AI-generated material says whether a human has reviewed it, and the evidence is shown alongside, so anything AI has written can be checked against the regulation, the minute or the code it came from.

---

## Getting access

There is no separate account or password for the DRR Tracer Agent. It uses your ISDA sign-in.

1. Go to drr-traceability.isda.org.
2. If you are not already signed in, you are sent to ISDA My Account.
3. Sign in there, and you are returned to the page you were opening.

If sign-in does not complete successfully, the Tracer Agent shows a message rather than sending you round again. Sign in at ISDA My Account first, then reopen the Tracer Agent.

---

## Do I need to be an ISDA member?

Access to the DRR Tracer Agent does not require ISDA membership. Anyone signed in can read the fields, the regulation references, the validation rules and the code.

Working group minutes are for members. Where a minute is linked to a field, a non-member sees it marked "ISDA members only" instead of the minute itself.

ISDA membership is held by the firm rather than the individual, so if your firm is a member then you are covered. See ISDA membership for the categories and how to apply.

---

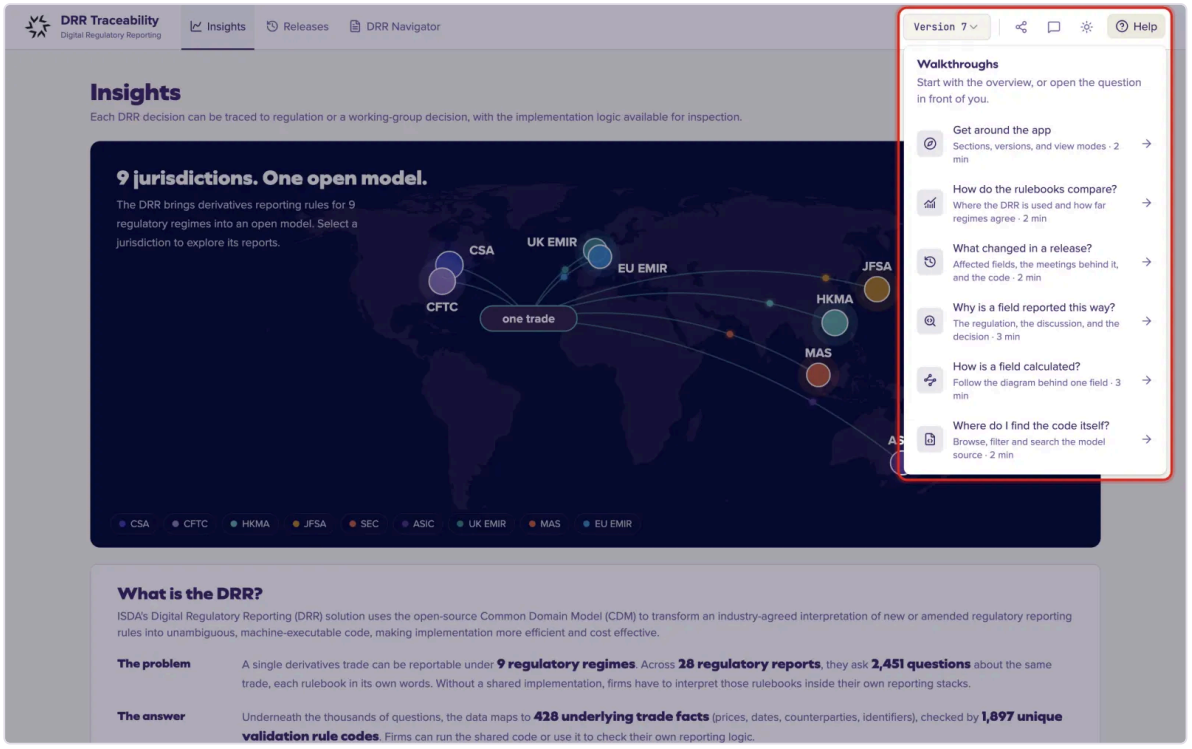
## Using the DRR Tracer Agent

Three sections sit at the top of every screen:

- **Insights** for patterns across the regimes: where DRR is used, and how far the rulebooks agree.
- **Releases** for what a DRR version changed, and which fields it affected.
- **DRR Navigator** for one field at a time. Pick a regime, then a report, then a field, and read why it is reported the way it is.

A control in the header switches between **No-code** and **Code**. No-code explains a field in words, while Code shows the diagram and the source behind it. Both describe the same thing. The version selector sets which DRR release you are reading, and everything on screen follows it.

The rest is explained inside the Tracer Agent. **Help** sits in the top right of the header on every screen and offers short walkthroughs. Each one runs in the live tool, points at the real controls, and can be left at any time.



Help sits in the top right of the header, on every screen.

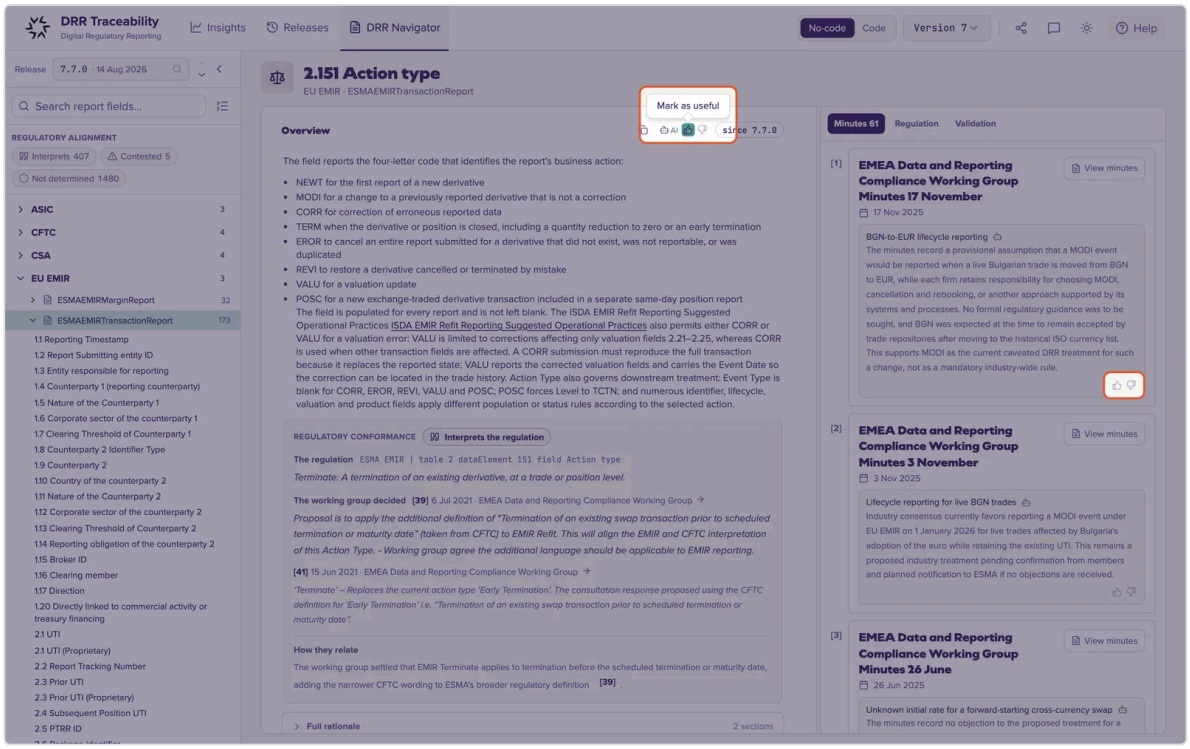
Six walkthroughs are available, each no longer than three minutes. Start with "Get around the app", then pick the one that matches your question.

---

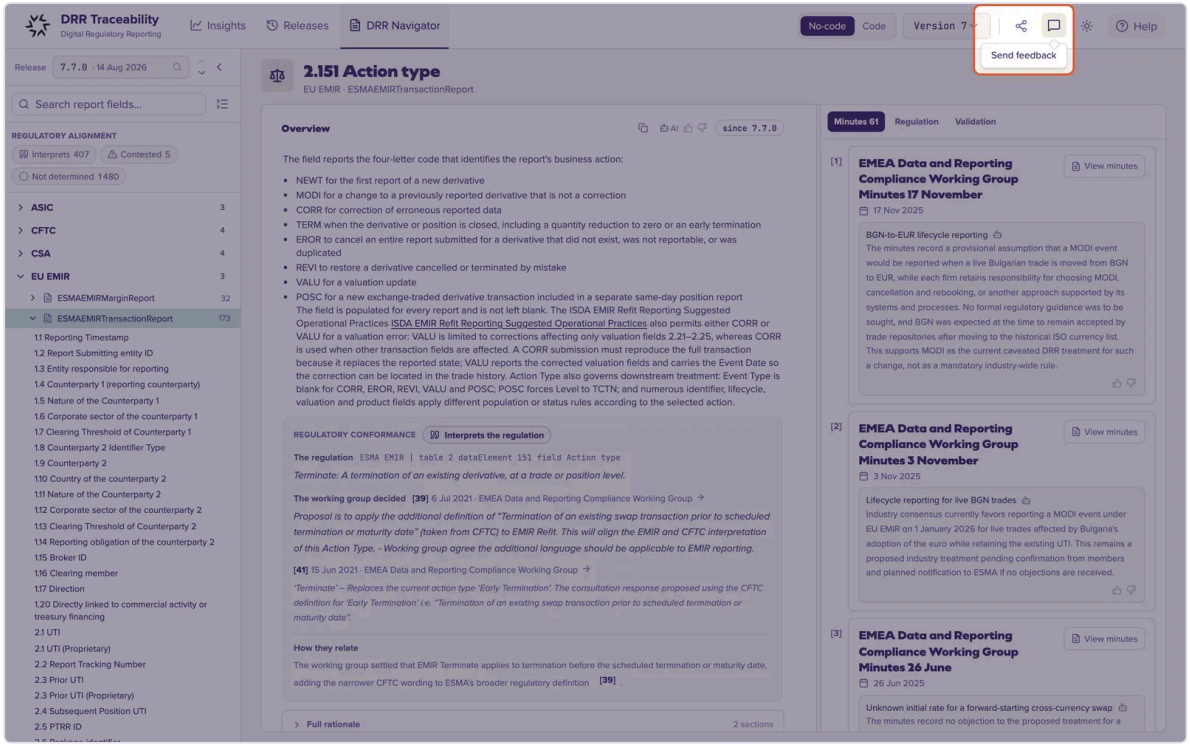
## Giving feedback

If the Tracer Agent has something wrong, tell us. Maybe a summary does not match what was agreed in the meeting, or the Tracer Agent shows no discussion behind a field that you know was discussed.

- **Thumbs up and down** in the Tracer Agent sit beside each part of a field's record. Use them on whatever you are reading, and add a comment to say why.
- **The feedback button** in the Tracer Agent is for anything else, whether that is a problem, an idea or a question. Your message reaches us with the page you were on, so there is no need to explain where you were.



Thumbs up and down sit beside each part of a field's record: the summary here, and every minute linked to the field.



The feedback button sits in the header, two along from Help, on every screen.

A correction from one reader improves what everyone sees next. That is what a shared interpretation depends on.

## Acceptable use

By using the DRR Tracer Agent, you accept its acceptable use policy. The policy sets out who may use the Tracer Agent, and what may be done with the working group material in it. Read the acceptable use policy (PDF).

## Where to find out more

- **The DRR Tracer Agent itself**: the **Help** button, for how each screen works.
- **DRR and the CDM**: ISDA Digital Regulatory Reporting.
- **Membership**: ISDA membership.
- **Sign-in problems**: ISDA My Account.
- **Anything else**: use the feedback button in the Tracer Agent.

**DRR Tracer Agent**, built for ISDA by Gentek, agentic AI for regulated operations.
